

The XR MCD ATC Operations Department acknowledges the existence of several airports on the territory of the MCD, where operating procedures for certain *TWR* ATC positions in real life are different than those that are normally expected within the IVAO Network. Therefore, in order to standardize such operations within the IVAO Network, those positions are replaced with the positions, whose normal service procedures within IVAO correspond to their real life duties. The ATC station callsigns, however, might be preserved. A list of such airports with their ATC positions in IVAO is published and available at the IVAO XR MCD Forum ([link](#)).
